- Points 100
- Submitting a website url or a file upload

Assignment: Language Fundamentals

Mobile Applications Development 2

Instructions

Build a small program that analyzes a dataset you choose. You will practice using tuples, functions, and closures.

Use concepts learned in Module 1.

Requirements

Select at least 5 data items of your choice, such as:

- Products and prices
- Students and grades
- Cities and populations
- Books and page counts

Store your data as an **array/list of tuples** (for example, `(name: String, price: Float)` in Swift or `(name: 'Book', price: 19.99)` in Dart).

Write **one summary function** that returns a tuple containing at least two summary values, such as maximum and minimum, or average and count.

Write **one filter function** using a closure that selects a subset of the data based on a condition you define (for example, prices over $100 or grades above 70).

Print both the summary result and the filtered data to the console.

Track Instructions

Native iOS Track: Complete this assignment in Swift using Xcode Playground.

Flutter Track: Complete this assignment in Dart using DartPad.

Deliverables

Submit one file for your track containing:

- Your dataset (at least 5 items stored as tuples)
- One summary function returning a tuple
- One filtering function using a closure
- Console output showing the results

Native iOS Track: Submit a single Swift Playground file.

Flutter Track: Submit a single Dart file or your exported DartPad code.

Assignment1

Criteria	Ratings		Pts
Program Execution Program runs successfully.	**25 pts** **Full Marks**	**0 pts** **No Marks**	25 pts
Dataset Structure At least 5 data items stored as tuples.	**25 pts** **Full Marks**	**0 pts** **No Marks**	25 pts
Summary Function Summary function returns a tuple with at least two summary values.	**25 pts** **Full Marks**	**0 pts** **No Marks**	25 pts
Closure Filtering Filtering function uses a closure correctly.	**25 pts** **Full Marks**	**0 pts** **No Marks**	25 pts
			Total Points: 100
