Assignment: UI Fundamentals

Mobile Applications Development

Instructions

Build your own small interactive ordering app. You will practice layout, images, styling, state, lists, conditional UI, and user interaction.

Use concepts learned in Module 2.

App Theme

Create an ordering app for a store, service, or activity of your choice. Examples include:

- Coffee shop
- Pizza or restaurant order
- Movie snacks
- Campus bookstore
- Smoothie bar
- Pet supplies

Requirements

Your app must include a clear title and at least one image, logo, or visual element related to your theme.

Display at least **4 order items**. Each item should include a name and price.

Use state to allow the user to make at least one selection, such as choosing an item, selecting a tip, adding an extra option, or turning an option on or off.

Include at least **one conditional UI element**. For example, show an extra option only when

a toggle is turned on, or show a message only after a selection is made.

Calculate and display a total price based on the user's selections.

Include a confirmation button that shows an alert, dialog, or confirmation message when the order is submitted.

Organize your interface into smaller reusable parts where appropriate. Avoid putting everything into one large block of code.

Design Expectations

Your app should look like a finished mobile screen, not a quick dummy layout. Pay attention to spacing, alignment, colors, fonts, images, and overall visual balance.

Use a consistent theme that matches your app idea. For example, a coffee shop app should not look like a default empty template with random text.

You are encouraged to customize backgrounds, buttons, cards, images, and text styles to make the app feel polished.

Explore One New UI Element

Explore and use at least **one UI element or feature** that was not directly covered in Module 2.

Native iOS Track: Try one additional SwiftUI view or modifier, such as `Stepper`, `Slider`, `ScrollView`, `Divider`, `Spacer`, or a new styling modifier.

Flutter Track: Try one additional widget or property, such as `Stepper`, `Slider`, `Card`, `GridView`, `SingleChildScrollView`, `Divider`, `Spacer`, or a new styling property.

Add a short comment in your code identifying the new UI element or feature you explored.

Track Instructions

Native iOS Track: Complete this assignment in SwiftUI using Xcode.

Flutter Track: Complete this assignment in Flutter using VS Code.

Deliverables

Create a GitHub repository for your project and submit a GitHub link for it. Your submission

must include:

- A working interactive order app
- At least 4 order items with names and prices
- User selection using state
- At least one conditional UI element
- Total price calculation
- Confirmation button with alert, dialog, or message
- At least one image, logo, or visual element
- At least one new UI element or feature not directly covered in Module 2
- A polished visual design that matches your app theme

Assignment2

Criteria	Ratings		Pts
Interface Layout and Design Application includes a clean layout, proper spacing, readable text, images or visual elements, and an overall polished design that matches the app theme.	**20 pts Full Marks**	**0 pts No Marks**	20 pts
User Interaction and State Application correctly uses state and interactive controls to update the interface based on user actions.	**20 pts Full Marks**	**0 pts No Marks**	20 pts
Required Features Application includes all required elements, including multiple order items, conditional UI, total calculation, and confirmation dialog or alert.	**25 pts Full Marks**	**0 pts No Marks**	25 pts
Code Organization and Reusability Code is organized, readable, and separated into reusable components, widgets, or views where appropriate.	**15 pts Full Marks**	**0 pts No Marks**	15 pts
Exploration of New UI Element Application includes at least one additional UI element, widget, modifier, or feature not directly covered in the module.	**20 pts Full Marks**	**0 pts No Marks**	20 pts
